Models Ford gearboxes. Faults bridges Ford Foton GAC Geely The history of Geely.Thanks to this powerful, reliable and able to move in almost any conditions, SUVs of the brand receive enthusiastic reviews of car owners not only in the US, but all overIn the competition, as a result, participated 3 automakers American Bantam Company,The most successful model was introduced by American Bantam.As a result, both manufacturers received an order of 1500 cars. Deliveries of new products started already in 1941. And six months later,The car was equipped with a Willys 77 engine and a threespeed transmission.In the postwar period, the company was engaged in the creation of cars, which did not differ much from theThe civilian jeepJust at that time, the popularity of Willys products began to gradually decline. As a result, in 1953, Willys became a member of Kaiser.

Since 1972, the manufacturer began to equip its cars with fully automatic transmission with a permanent allwheel drive. One of theIn 1974, debuted the sporty twodoor Cherokee, and in 1976, the release of the updated CJ7, which was equippedIn 1978, the limited edition Wagoneer was launched a Limited modification with leather interior, radio andThe car offered the traditional advantages of the Jeep family endurance and unsurpassedIn 1992, at the auto show in Detroit started a new line of midsize SUVs Grand Cherokee, whichAt that time, the Grand Cherokee was the best car in its class, and its success was terrific.The car combined a refined design, excellent patency, softness of course and, of course, safety. Thanks to these features, the car has setAlso this year the newThe car was equipped with a QuadraDrive II transmission, which allowed the transmission ofEvery year, the companys engineers add to their models more and more useful new features thatEspecially popular in the Jeep range are the Cherokee, Grand Cherokee, Wrangler and Compass models.All content on the site is taken from free sources and is also freelyThe site administration does not bear any responsibility for illegal actions, and any damage incurred by the copyright holders. Will the 98 Grand Cherokee Owners Manual cover the Limited 5.9 I need an answer ASAP if possible. Thanks.NoVA Jeepers I have an email to a friend that also has a 5.9 so once I find out Ill PM you. I was beginning to think that all the 5.9 owners have gone off to another forum. I guess I need to see if there are any other forums that deal with the Grand Cherokees. I like this forum but it is hard to get answers to questions. Yet any aftermarket question had answers.Mine is missing so I want one. Thanks Again.I agree theyre def nice to have. Keep an eye out on ebay.So yours gives all the specs.

Unlike the Explorer, the Grand Cherokee utilized monocoque unibody construction, whereas the Explorer was a derivative of the Ranger pickup with a separate body on frame. The vehicle that was driven was a Poppy Red Clear Coat 1993 Grand Cherokee ZJ Laredo with a quartz cloth interior and highback bucket seats.

Power windows and locks were not standard equipment on the base trim. The minimal price tag differential resulted in low consumer demand, and as a result, the lowline model was eventually discontinued. Additional standard features included a driverside airbag and fourwheel antilock braking system ABS. The Laredo was the midscale model with standard features that included power windows, power door locks, cruise control, and a leatherwrapped steering wheel. Exterior features included mediumgrey plastic paneling on the lower body and fivespoke alloy wheels. The Limited was the premium model, featuring bodycolor lower body paneling, and gold exterior accents. The Limited also boasted standard features such as leather seating, heated mirrors, front power seats, a keyless entry system, woodgrain interior applique, lace style alloy wheels, a driver information center with a compass, digitized climate control, an electrochromic rearview mirror, and Jensen brand stereo with multiband equalizer. By 1996 the options list grew to include heated seats. Standard was the 4.0, with the 5.2 V8 and 5.9 in 1998 being optional, as with other models. Package groups with the various trim levels included fog lamps, skid plates, as well as convenience, lighting, luxury, power, security, and trailer towing packages. Transmission choices included a fourspeed automatic transmission early production ZJs used the AW4—the A500SE later 42RE replaced the AW4 during the latter half of the 1993 model year or an Aisin AX15 manual transmission. Low demand for the manual transmission resulted in its discontinuation after 1994, but Europeanmarket ZJs retained it when coupled to the diesel engine which was unavailable in North America. The drive train choices included rearwheel drive or fourwheel drive. In 1995, the engine dropped 5 horsepower to 185 due to new EPA regulations imposed on the 1996 model year. The production of this model was 14,286 units. The European model was coded WG.

The spare tire was relocated from the side of the cargo compartment to under the floor. Like the 1998MY ZJ, the rear tailgate glass opened separately. The two heavy pushrod V8 engines were replaced by Chryslers thennew PowerTech. The new V8 engine produced less torque than the old pushrods, but was lighter, offered better fuel economy, and provided similar onroad performance figures the 23gallon fuel tank was replaced with one of a 20.5gallon capacity. The straightsix engine was also updated. A redesign of the intake manifold added 10 horsepower 7.5 kW. While other Jeep vehicles used the Mopar 5 4.5 bolt circle, this was the first Jeep following the 1987 Chrysler buyout to receive a wider bolt pattern—5 5. This twospeed chaindriven transfer case uses a gerotor, a clutch pack coupled to a hydraulic pump, to transfer torque between the front and rear axles. The transfer case contains three modes, 4All Time, Neutral, and 4Lo. In 4All Time, 100% of torque is sent to the rear axle in normal conditions. If the rear axle starts spinning at a higher rate than the front axle, hydraulic pressure builds up in the gerotor and causes the clutch pack to progressively transfer torque to the front axle until both axles return to the same speed. A neutral mode is intended for towing the vehicle. In 4Lo, the front and rear axles are locked together through a 2.72 reduction gear ratio. The NV247 transfer case is mated to front and rear axles containing Jeeps VariLok differentials. VariLok differentials also use a gerotor to transfer torque between the wheels on either side of the axle. The major advantage of QuadraDrive was that the combined transfer case and progressive locking differentials in each axle could automatically control traction between all four wheels. However, only the center differential could be permanently locked, and only in 4Lo. The QuadraTrac II system included the NV247 transfer case with the standard open front and rear differentials.

It included three planetary gear sets rather than the two normally used in a fourspeed automatic. This gave it six theoretical speeds, and it would have been the first sixspeed transmission ever produced in volume, but it was programmed to only use five of these ratios. Four were used for upshifts, with a different second gear for downshifts. For MY 2001, the programming was changed to make use of all six ratios. Rather than have six forward gears, the transmission was programmed to act as a fivespeed with the alternate second gear for downshifts. It had slight changes from the previous model Grand Cherokee. The redesign allowed for larger rear doors, and more space for rear passengers. Controls for various items like headlights, heated seats, and rear wiper were moved to more convenient locations. Limited models included automatic dualzone climate control. A 10CD changer was also available with the Infinity Audio package. UniFrame is an unusual construction scheme, it incorporates all of the strength and durability of a bodyonframe construction into a unitized construction. More than 70 percent of the underbody is highstrength steel. All Jeep Grand Cherokees feature UniFrame construction. This Jeep has gained 4 stars in the Euro NCAP crash safety tests conducted in 2005. The lower portion of the front bumper was still removable as it was from launch to increase the approach angle for offroad use. The 4.7 L was refined, now producing 305 hp 227 kW; 309 PS, and 334 lbft 453 Nm. This culminated in the Chrysler Chapter 11 reorganization that same year. The interior features leather trim and real wood accents, plus Bluetooth and uConnect electronics options. Unlike previous generations, it features fourwheel independent suspension for better onroad handling. The Chrysler designed platform was part of the DaimlerChrysler engineering projects that were to launch the WK2 Grand Cherokee with the MercedesBenz ML to follow.
