SourceSecurity.com, the complete security industry guide Find Dedicated Micros ECO4 CD80GB or any electronic security product from the extensive 20000. Selon la puissance de sortie des micros,. Reload to refresh your session. Reload to refresh your session. Alternatively, a user can choose one over the other to suit a particular circumstance. In either mode, this unit is capable of video recording speeds up to 120 FPS for the combined video inputs. Working from a remote network PC, multiple clients can access the unit for viewing and camera control at the same time a local operator is using the DVR to record and view

live video, with no degradation in performance. In addition to the main storage drive, this DVR features a builtin DVD burner, offering an easy way to archive and transfer critical event material. <http://detector-billetes.com/Imagenes/hyvst-airless-paint-sprayer-user-manual.xml>

Simultaneous MPEG4 and JPEG Transmission Dual streaming allows a user to record in the high resolution MJPEG format while viewing live images in the fast MPEG4 format. A user can also choose one over the other to suit a particular application. This is especially useful in a network environment where MPEG4 is streamed over a low bandwidth link to remote Internet users while local Intranet clients utilize the MJPEG format for high resolution viewing and recording.

MULTIWAY DuoVu with Manual and Automatic Switching The main monitor can be set to display cameras in full or in various multiimage modes with up to 16 moving pictures on one screen. Switching between cameras in full and multiscreen mode can be done manually or by programming auto switching with sequential dwell times. BuiltIn DVD Burner In addition to the main storage drive, this unit features a builtin DVD burner for copying material to a CD or DVD optical disc. This allows important event footage to be quickly handed over to the authorities without having to surrender the entire unit or having to hook up a VCR to the back and copy footage that way. DMs NetVu ObserVer software is automatically recorded along with the video to the disc, ensuring easy playback on any PC not DVD player equipped with a DVDROM drive. Network Connection with Included NetVu ObserVer Software While most manufacturers offer networking software as an option, Dedicated Micros supplies each SP2 unit with a proprietary NetVu program, offering a whole host of features not available using a standard Internet browser. Clients working from a remote PC can access the DVR for recording and viewing as well as to control PTZ cameras. NetVu can be integrated with other DM products including the DVIP Decoder, NetVu ObserVer and PDA Viewers. NetVu is also cross compatible with thirdparty products and SDKs to ensure future interoperability.

Text Support Text support is a unique function that other manufacturers offer only as an option on select DVRs. Text support allows electronic transaction data such as POS, ATM data gathered from debit and credit cards as well as production line text to be captured in tandem with the video footage. This will allow officials to match a persons face with a specific transaction. POS and ATM devices connect directly to this DVRs RS232 COM ports. Hidden Camera Function Any camera can be selected to record in the background without actually appearing on the monitor. This prevents a potential intruder from figuring out camera locations by glancing at the multiimage screen. Hidden cameras can still be viewed over the network. Motion Detection Based Recording Recording can be continuous or programmed to begin at a date and time, at the event of an alarm or when triggered by its sophisticated motion detection system. This not only saves valuable hard drive storage but also makes it quick and easy to locate a piece of footage. Digital Authentication This function preserves the integrity of important material by detecting whether the image or series of images has been tampered with since it was written to the storage media. Pre and Post Alarm Recording A number of optional external sensors can be used to trigger an alarm such as when a door or window lock is being forced open, a light is turned on or when a person walks through a room. Multiple alarms can trigger one camera and one alarm can trigger multiple cameras. Up to 15 minutes of pre and post alarm footage is protected from being overwritten. An alarm event can also trigger automatic recording to an FTP server or to a DVD or CD disc. Users over the network can be notified of an alarm occurrence via Email or SMS. Optional External RAID Devices Recording times can be further extended by adding optional external hard drives to this units builtin SCSI2 connector.

<http://fscl.ru/content/fowles-cassiday-analytical-mechanics-solutions-manual>

SCSI hard drives configured in a RAID system, in addition to providing massive amounts of additional storage space, offer failsafe operation by having the ability to reconstruct information from all other drives should any one drive fail. Up to a total of 8 contacts may be assigned to each camera input. Let us know YOUR RECENTLY VIEWED ITEMS Browsing History ON Clear History

Not responsible for typographical or illustrative errors. Servicing Do not attempt to service this unit yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel. Ventilation Ensure unit is properly ventilated to protect from overheating. All the safety and operating instructions should be read before. Note Please contact your system administrator to be issued a PIN number. Furthermore, onsite operations have been enhanced with features such as DVD archiving and Duoview whilst maintaining the DS2's familiar user interface. Advanced functionality includes Remote Alarm Management The new DS2 is now capable of integrating into a network based security system, with full support for Alarm Receiving Centres Improved recording flexibility The DS2 has always provided useful facilities to control the amount of data that is recorded and ensure that there is sufficient capacity to meet the record durations customers require. Improvements in the configuration of recording in the new DS2 allow even greater control and efficiency, while maximum storage has also been increased. Enhanced local control The DS2 is renowned for its easy and intuitive local operation support. Improvements in local archiving, alarm display and image viewing make the new DS2 better than ever for the local operator.

The IR01 Remote IR Receiver allows a Dedicated Micros Digital Video Recorders including Digital Sprite 2, BX2, or D4 to be controlled from a remote location using the infrared remote control handset. The combination of the remote IR receiver and the IR remote control ensures that full operational control can be achieved at any remote location and ensures that the DM DVR's and accessories are the right choice for any applications. The junction box converts from MMJ to UTP Cat 5 and using an additional power supply the signal is amplified allowing the usual 3 meters from main unit to device to be increased. The junction box can also be utilised as a power break out connector for DM 485bus devices, taking a 12V supply this can be distributed as required. The DM 485bus Junction Box increases the scope for including the Dedicated Micros DVR and multiplexers into a system solution and allows the overall surveillance area to be increased; this is achieved without loss of performance for control. Increasing the alarm inputs already supported on the unit allows any peripheral alarm device to be integrated into the CCTV system and ensures that video evidence is available for any alarm incident. With the addition of the remote Alarm Module it is possible to increase the performance on the DM video product, for example Configurable within the DM video device it is possible to determine how the relays will operate; manually intervention to activate the relay or trigger automatically, the relay

module is seen as an extension to the onboard relays supported on the DM video devices ensuring the system integration is seamless.

The distinct advantage of including this module means that high security applications can be secure in the knowledge that the video images stored have accurate timing information and therefore give confidence when presenting the recorded video for evidence. As multiple DM DVR's can be connected together in single system, the Wharton Clock Interface module becomes even more important in that it now also ensures the multiple DVRs are synchronised together and hold the same timing information. This feature is essential in applications where associated cameras could be connected. This converter ensures applications that do not have access to an Ethernet network are not just limited to local monitoring and control, it allows the video and data from the DM multiplexer or DVR to be transmitted to a remote location and offer remote viewing and control to be achieved. The Converter receives the RS232 data from the remote keyboard and converts this back to the 485bus protocol to be passed to the DM multiplexer or DVR, which will then action the Operator commands. There are two specific operations that including the 485bus adapter will allow the system to achieve; integration of 3rd party controllers and remote esupport. Remote esupport The 485 bus adapter was originally designed to allow remote access to the Dedicated Micros range of analogue multiplexers Uniplex Series 1 and 2, DX Pro and Classic Sprite. Using the esupport software application opens the communication path between the PC and the DM multiplexer via a 56K Modem. This configuration would then provide This ensures that access and control of the main functions supported on the DM Multiplexer can be interrogated by the Controller. These applications demonstrate the flexibility and the potential of the DM 485bus adapter. [Dungeon Masters Guide 1 Free ebook download as PDF File .pdf or read book online for free. As soon as I connect to the DVR it automatically spits out all types of info without requesting it. Maybe I have the port settings incorrect. Im connected through Port 1 of the DM to Port 3 my NI4100. The MCI command list I obtained from Dedicated Micros makes reference to 2 different types of comm settings. There are even more options once Im inside DM serial port setup. Any help Thanks. I have since tried to avoid the units as it seems that the company likes to remove features from the serial control when it updates. Their units are also significantly more expensive than their competition without any benefits to me since they have removed said control features If I remember anything specific, Ill try to post the info. I am actually working on a DS2 tomorrow on a job, but it is already functional. Did you make sure the unit is configured properly within the onscreen menus Jeff I cant seem to find any information as to what it should be set to. Even the MCI manual makes reference to 2 different comm settings. Am I better off going IP control. Whats involved in that If not, that might be your problem. Jeff If you want to get involved, click one of these buttons! Powered by Vanilla Forums. Model DS2A DX16C320GB. Also See for Digital Sprite 2.
